CULTURE TANK

The environment in the fish rearing tank must meet the needs of the fish, both in respect of water quality and tank design. Choosing the right tank design, such as size and shape, water depth, self-cleaning ability, etc. can have a considerable impact on the performance of the species reared.

Circular tanks are attractive for the following reasons:

- simple to maintain
- provide uniform water quality
- allow operating over a wide range of rotational velocities to optimize fish health/condition
- settleable solids can be rapidly flushed through the center drain
- designs that allow for visual or automatic observation of waste feed to enable satiation feeding are possible

Available Sizes

• **1 Ton**

• **2 Ton**

• **3 Ton**

• **5 Ton**

• **10 Ton**

Our Products:

Aqua Culture Tank

Biological Filter

Drum Filter

Protein Skimmer

Sedimentation Tank

RAS Accessories etc
