PROTEIN SKIMMER

(FOAM FRACTIONATOR)

Many of the fine suspended solids and dissolved organic solids that build up within intensive recirculation systems cannot be removed with traditional mechanisms. Protein skimmers clean your saltwater tank by collecting and removing these microscopic pollutants and suspending them in a layer of fine foam or bubbles. This leaves your water clearer, cleaner and safer for your fish and corals. They don't target proteins specifically, but instead filter out the organic waste products in the water: Skimmers collect and remove dissolved organic compounds (DOCs) floating in your tank's water; there's actually very little protein in an aquarium. While ocean water rarely has a high concentration of DOCs, they can build up quickly in a closed system like an aquarium.

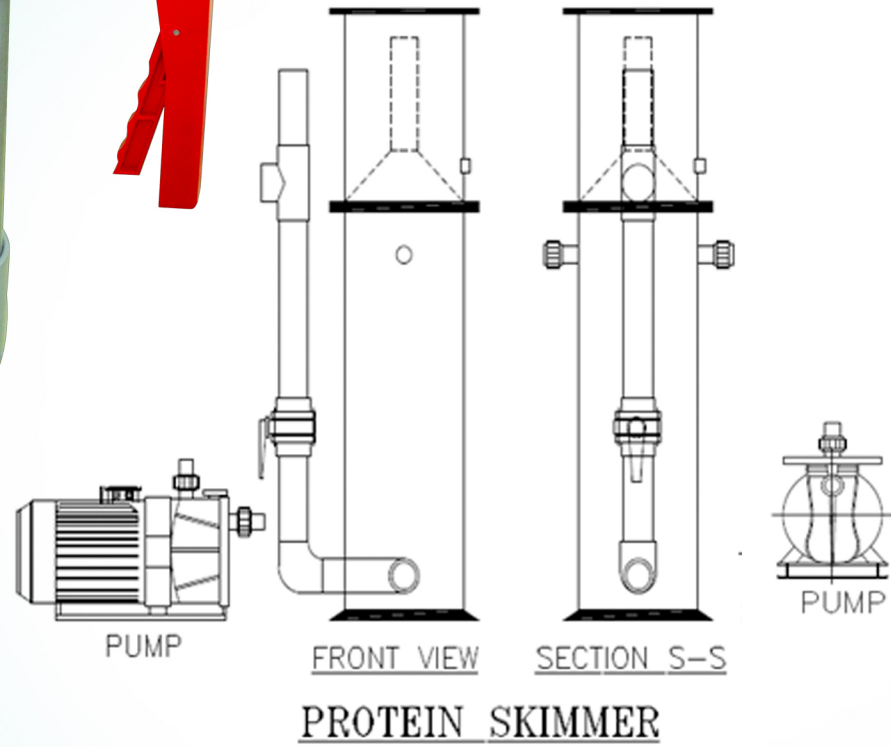

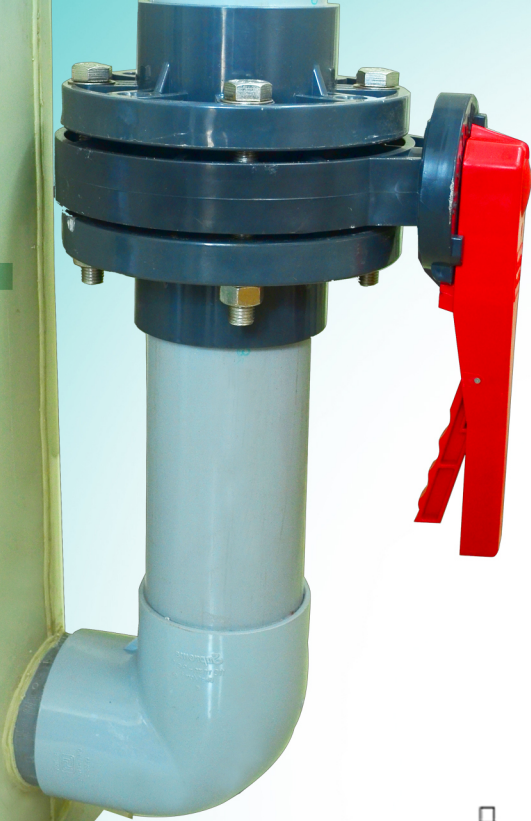

Our Products:

Aqua Culture Tank
Biological Filter
Drum Filter
Protein Skimmer
Sedimentation Tank
RAS Accessories etc

Email: aquablueras@gmail.com

aquablue

Skimmer Equipped with:

- Control PVC butterfly valve imported
- Venturi 50mm imported
- Swimming pool pump imported
- Plumbing Accessories & Etc

PRODUCT INFORMATION:

Model	Size (DxH) mm	Collection Chamber (mm)	Inlet / Outlet (mm)	Water Flow / hr	Power (HP)	Material
PS-10T	300 x 750	300 x 600	DIA 50/63	10 Ton	0.5	Acrylic & PP
PS-25T	400 x 1200	400 x 600	DIA 63/90	25 Ton	1	Acrylic & PP
PS-50T	550 x 1200	Without Chamber	DIA 2 x 63/110	50 Ton	2	Acrylic & PP
